Continuation of 5. does NOT place the application in condition for allowance because: Applicant arguments are not persuasive. The claims (e.g. claim 12) do not specify that the claimed element is notification to the computer and the term a notification that a new resource has been installed on the network is only in the claims, no description for that term in the specification.

Applicant argues: Van Huben doesn't disclose retrieving search information associated the data and tasks of the new resource. In response, Van Huben discloses: retrieving search information associated the data and tasks of the new resource as auto reader service machines which means when the resource have been installed in the library, the service machines have (retrieve) information and task of new resource and capable to performing virtually any software task (see also col. 32, lines 46-51).

Applicant argues: Van Huben doesn't disclose storing the first portion and second portion of the search information in a first manager and data store and second manager data store respectively. In response, Van Huben discloses: storing the first portion of the search information in a first manager data store as automatic library machines (managers) control information and stored information into a data structure along with all pertinent control information (see col. 39, lines 65 to col. 40, lines 11).

Applicant argues: Van Huben doesn't disclose determining that the second portion of the search information relates to a second manager In response, Van Huben discloses: determining that the second portion of the search information relates to a second manager (see col. 37, lines 8-15).
